Institution/Training/Labor Personnel
Services
Onshore/Offshore

Description: GT&E currently offers a 13,000 sq. ft. training facility with each classroom designed for interactive participation and is fully computerized with pc, projector and access to internet, as well as 40+ GB library of tabletop exercises, materials data, accident reports/ investigation and interactive scenarios that are linked directly to the course curriculum. There is an offshore lab area equipped with fully operation production safety systems simulator with flowing vessels to give flowing vessels to give students real experience with life-size equipment. The confined space evolution allows students to practice both vertical and horizontal rescues from an actual confined space. The HAZWOPER training ground gives students full range of chemical spill simulations. They will complete and fulfill their emergency response plan, set up zones of control, and get hands-on in cleanup and remediation. Fire fighting is taught using portable fire extinguishers on both flammable liquid fire evolutions and standard combustibles evolutions that will meet most regulatory requirements. Water survival training area includes a fully indoor heated pool, where students will be using personal floatation devices, life floats, a helicopter simulator and multi-person seating H.U.E.T. Courses are offered internationally, nationally, and statewide, and the training meets those standards prescribed by the American National Standards Institute and includes regulatory training and offshore skills. All IADC Rig Pass, SafeGulf and PEC Safe Gulf courses are offered twice weekly. Global uses an offshore pedestal crane for Crane Operator and Competent Rigger training, as well as Forklift Operator training with operational testing on a Danmar forklift. Security programs to the Homeland Security NIMS and FFPA 1600 guidelines are provided by certified staff personnel. Global maintains credentials from API, IADC, PEC/Premier, Safe Gulf, Medic First Aid, NREP, TEEX, ASSE, LSU, as well as other certifying authorities.

Onshore/Offshore

Description: The Training Institute is the educational arm of the International Petroleum Museum, which includes the following training opportunities: Formal In-House Instruction & Classes; Educational Agreements (with ULL & other educational institutions offers certifications, licenses & credentials in a wide variety of specialties); and Contracted Classes (training opportunities with outside instructors or training companies). The Formal In-House Instruction and Classes are part of an on-going program of the Institute. Employers, working with the institute, provide classes for specialized training of their own students on a wide range of topics. These classes are usually sponsored by the company whose employees are being trained and range in length from one day to one week. Instructors are provided by the company, and only the training location, meals and bunkrooms are provided by the Institute. Other classes conducted through the Institute are open to any company/employer or individual. Orientation to Offshore is a 12-day program that combines classroom instruction with hands-on experience on an authentic offshore platform to gain realistic knowledge of the offshore experience. All trainees live aboard the rig throughout the training course. Training is divided between classroom experience and time on the work deck. First-hand experience is gained by actually using appropriate safety equipment, hand tools, cables and slings, hand signals, lift equipment and a wide array of skills needed offshore. Candidates successfully completing the twelve-day training program will receive certificates of completion for FA / CPR, Rigging & Handling Loads Safely, Offshore Water Survival, Confined Space Entry, Reparatory Protection, Lockout / Tagout, Personal Protection Equipment, Hazwoper Awareness, Fire Prevention & Fire Fighting, Rig Pass and/or PEC. All candidates completing this course will be qualified to begin work at the entry level position of roustabout or rigger with all appropriate certifications.

Description: DNR provides database access related to oil and gas drilling/production, State mineral leases, coastal data and State Energy Office programs. It provides access to millions of electronic documents including scanned images such as Conservation well files and well logs and Mineral Resources lease files as well as Conservation field orders and administrative orders indexes. It also provides GIS access to interactive maps and features active state-owned mineral leases, coastal use permits, coastal restoration projects, and aerial photos, as well as online tutorials for using GIS. This information and more is available through DNR's Strategic Online Natural Resources Information System (SONRIS) at www.sonris.com. Training for using SONRIS is scheduled occasionally in select locations. Contact information for SONRIS Data and Web Technology, Marvin Richey, Information Technology Director, 225-342-1455; Energy (Oil and Gas) Reports and Statistics, T. Michael French, Technology Assessment Director, 225-342-1275; Coastal Use Permits, Rocky Hinds, Permits Mitigation Program Manager, 225-342-7998; Coastal Zone Management Program, Jim Rives, Acting CMD Administrator, 225-342-8921; Oil and Gas Regulatory Program, Todd Keating, Petroleum Engineer Administrator, 225-342-5507; Oil and Gas Production Information, Minerals Production Manager, 225-342-5532; Drilling Permits, Todd Keating, Petroleum Engineer Administrator, 225-342-5507; Underwater Obstruction Removal Program, Steven Giambone, Engineer, 225-219-9860; Abandoned/Orphaned Oil Wells, Doyle Johnson, Petroleum Engineer, 225-342-5548; and State Mineral Lease Sales and Bidding on State Lands, Rick Heck, Petroleum Lands Director, 225-342-5548.

Description: In response to local refining industry requests, MSU offers two-year and four-year degree programs with concentration in Process Plant Technology. Courses are offered in field processing of crude oils and natural gas, petroleum refining processes, and economic principles of the design of refinery equipment, as well as upstream operations such as subsurface exploration. Engineering and Technology students who meet the criteria are eligible to apply for work-study positions. Co-op and intern students are selected by industry based on grades, experience, and interviews. During their sophomore and junior years, successful applicants alternate semesters as full-time students at McNeese and full-time workers in industry.

Description: Trenchless technology includes a large family of methods utilized for installing and rehabilitating underground utility systems with minimal surface disruption and destruction resulting from excavation. There are four main divisions of trenchless technology: inspection and assessment techniques, new installation techniques for pipelines and cables, rehabilitation techniques for pipelines, replacement techniques for pipelines. All of these have strong application in the oil and gas sectors. Remote interior inspection and assessment techniques for pipelines are already well developed in the oil and gas pipeline industry for major pipelines through smart pigging and other applications. However, continued advances in these techniques are very important to the industry in terms of effective asset management and prevention of pipeline failures. New installation techniques are where the oil and gas industry has benefited most from the development of trenchless technologies. In particular, the development of horizontal directional drilling (HDD) has revolutionized river crossings for oil and gas pipelines and smaller rigs have become essential tools in building distribution networks for gas supply. HDD provides an installation technique that typically is cheaper in first cost, provides far less environmental impact, and is more maintenance free than open-cut crossings. Louisiana installed several of the early HDD river crossings and has remained an important state in the large river crossing industry. Many of the oil and gas pipelines in Louisiana are more than 40 years old. As they age, decisions must be made about their rehabilitation or replacement. Trenchless relining techniques usually can provide a full structural relining without the need to dig up and replace the pipe. Trenchless replacement techniques provide a means of bursting (fracturing) or slitting open the existing pipe below ground and then expanding the opening to allow a new pipe to be pulled or pushed into the space created. The Trenchless Technology Center is the

oldest and the leading national center for trenchless technology in the U.S. It has research programs in all of the above sectors of trenchless technology and is in the process of constructing a new trenchless technology research facility.

Description: It is the mission of Loyola University's Center for Environmental Communications to educate students in the field of environmental communications, to stimulate communications among environmental stakeholders, to provide the public with unbiased discussion of environmental issues, and to be a resource to the media for environmental information. Louisiana has a number of nationally important natural resource related activities that may, if improperly managed, be very environmentally damaging. If managed well, they will fulfill their vital roles, thus supporting a strong economy while minimizing harm to the environment. The primary areas of concern, which taken as a group are unique, include:
the impact of coastal and offshore oil and gas production
the presence of the nation's largest petrochemical corridor
coastal erosion [Louisiana has 40% of the nation's coastal wetlands and is experiencing 80% of the loss]
the precarious future of our coastal fisheries [the largest in the continental U.S.]
the impact of products that enter our state and associated waters via the Mississippi River

No other region of the country has this much environmental pressure exerted on its resources and populace! Entities outside Louisiana's borders own and govern more than 80% of Louisiana's coastal zone and nearly 100% of Louisiana's petrochemical businesses. In order to address these issues, the New Loyola University Center for Environmental Communications (LUCEC) will support the outstanding communications program of Loyola University New Orleans and lead to a more educated citizenry

LSU Center for Energy Studies

Institution/Training/Labor Personnel
Services
Description: The Center for Energy Studies (CES) is mandated by the Louisiana Legislature to provide energy information and analysis that responds to the needs of the legislature, public agencies, business, industry, and civic groups. Its primary focus is to conduct studies dealing with policies and trends affecting the oil and gas industry, especially with respect to offshore developments. CES is also designated as the Regional Lead Organization for the Central Gulf Region of the Petroleum Technology Transfer Council (CGR PTTC) which serves as an important gateway for the upstream (exploration and production) technology needs of the independent oil and gas operators. CGR PTTC holds approximately six to eight technology workshops each year around the state in Baton Rouge, Lafayette, Monroe, New Orleans, and Shreveport. Presentations are made by service companies introducing new technology and by university researchers presenting developing technology. Topics at recent workshops included Stimulation of Watered-out Inactive/Marginal Wells with Dual Completions; Understanding the Oil and Gas Reservoir Using Material Balance; Well Abandonment Methods and Regulations; Productivity & Economic Potential of Inactive/Marginal Wells in Louisiana; Low Cost Oil & Gas Recovery Methods; Cost Effective Horizontal Well Technology; Soil Remediation (Hydrocarbon & Brine); Application of Logging Tools for Improving Reservoir Interpretation; and Drilling Completion Technologies for Deep Shelf Gas.

Located in Robert, LA, the CPWD will help create a new talented workforce to meet both current and future operations capabilities. LSU brings to the program course offerings in Management and Leadership, Computer Training and Incident Command. Shell brings industry-specific courses already taught at the Robert facility.

LSU Downhole Water Sink Technology

Mr. Andrew Wojtanowicz

Phone: (225) 578-6049

Fax:

awojtan@lsu.edu

www.pete.lsu.edu/faculty/akw/dws.htm

Category: Educational

Institution/Training/Labor Personnel
Services

Description: Downhole water sink (DWS) is a new dual-completion technique for co-producing hydrocarbons and water from reservoirs with bottom water drive and strong tendency to water coning.

Conventional wells in these reservoirs produce increasing volumes of brine with decreasing amounts of oil or gas which ultimately leads to early shut downs of these wells without sufficient recovery of hydrocarbons in place. There are reportedly 34,355 inactive (shut-in) wells in Louisiana. Many of them are connected with large and strong aquifers and have become uneconomical due to excessive water production. The resulting by-passed oil may range from 40 up to 90 percent of the oil in place. The DWS technology has potential for producing oil from wells that have entirely watered out. It may also produce oil from thin oil pay zones underlain by a strong water column—unrecoverable by conventional wells. When combined with water flooding, DWS may improve sweep efficiency and recovery without changing the size or pattern of floods, i.e., without drilling new wells. Since 1998, the LSU Department of Petroleum Engineering has led a cooperative affiliation with petroleum industry, Downhole Water Sink (DWS) Technology Initiative, to develop and implement the technology. Participation in DWS Initiative has involved the oil and gas operators and service companies and sponsoring agencies such as Petroleum Technology Transfer Council, and others. Presently, the Department is, in a project supported by the state of Louisiana, further studying how the Downhole Water Sink (DWS) concept applies to the marginal and inactive wells in Louisiana. If applicable and implemented, the DWS technology in Louisiana would stimulate the State economy by modernizing petroleum production technology and increase the State's natural resources by adding some additional oil reserves to the pool of proved reserves.

LSU Earth Scan Lab

Ms. Nan Walker

Director/Professor

Dept. Oceanography and Coastal
Sciences

Baton Rouge, LA 70803

Category: Educational

Institution/Training/Labor Personnel
Services

Description: The enhanced oil recovery research at LSU petroleum engineering department consists of laboratory experiments at reservoir pressures and temperatures as well as computer simulation of developed EOR processes on a field scale. Novel processes of enhancing oil recovery have been developed based on (1) reservoir wettability alteration using low-cost dilute surfactants and (2) gas-assisted gravity drainage (GAGD). Unique capabilities include reservoir condition measurement of rock-fluids interactions (dynamic contact angles, interfacial tensions, adhesion, spreading and wettability), miscibility evaluation using a novel vanishing-interfacial-tension (VIT) technique, and core displacement tests in 6-foot long cores. The GAGD process, which has demonstrated oil recoveries in the range of 70-95%, is being patented and is available for licensing from LSU Office of Intellectual Properties.

Description: The mission of the Louisiana State University Fire and Emergency Training Institute is to provide training and education to fire and emergency response providers in order to protect life, property, and the environment. The training center is situated on 80 acres of land south of the main LSU campus, with training grounds designed to offer a large variety of fire, rescue and emergency response training. FETI has six class-rooms, a fire extinguisher building, a burn building and several burn props. Each classroom is equipped with audiovisual training aids. FETI is located about six miles from LSU's main campus on LSU property at 6868 Nicholson Drive Baton Rouge, LA 80820. The institute provides training to paid and volunteer fire service personnel throughout the state. Training is also provided to industrial fire and safety personnel, as well as to other emergency responders. The curriculum ranges from basic fire fighting skills to advanced technical training in rescue and hazardous materials and fire officer training. The duration of courses varies from a three-hour class to a six-week course. Last year, nearly 1,000 courses were delivered with an enrollment of over 20,000 students.

LSU Hurricane Center

www.osradp.lsu.edu/

Category: Educational

Institution/Training/Labor Personnel Services

Description: The OSRADP's primary function is to provide oil spill contingency planners and response personnel with the best possible tools available. To accomplish this goal, the OSRADP uses its annual budget to underwrite 10 to 15 research projects. Since the Fall of 1993, the OSRADP has supported a wide array of projects, such as field investigation and digital mapping of pipeline crossings on the Red and Atchafalaya Rivers; development of an oil brine spill restoration plan and symposium; training and research for blowout prevention utilizing full-scale well facility; a pipeline GIS for Monroe, Shreveport, Westlake, Sulphur, Lake Charles, Baton Rouge, New Orleans, and Lafayette; field application of AM fungi for restoration of an oil/brine spill site; phytoremediation for oil spill cleanup in upland habitats; use of ammoniated bagasse (ABS) for remediation; aerial videotape survey of the Louisiana coast; detecting the chronic effects of oil development in Caddo Lake; wave-current online system for oil spill contingency planning; trajectory analysis planner for Calcasieu and Sabine Lakes; the Louisiana GIS CD; and many more.

LSU Minerals Processing Research Institute

Mr. Ralph Pike

Phone: (225) 578-3428

Fax:

pike@lsu.edu

www.mpri.lsu.edu

Category: Educational

Institution/Training/Labor Personnel Services

Description: The Minerals Processing Research Institute has research and public service programs in process research and technology transfer, sustainable development, energy management and inherently safer design for industry. An extensive web site www.mpri.lsu.edu delivers research results and professional development courses. Current research is on new processes for carbon dioxide and carbon nanotubes, sustainable development, energy management (pinch analysis, cogeneration, on-line optimization) and inherently safer design and operations for chemical plants and petroleum refineries. One of the Institute's federally funded projects has demonstrated that greenhouse gas emissions can be minimized by converting carbon dioxide to useful products. Another is conceptual designs of two industrial scale processes to show the feasibility of producing carbon nanotubes in plants that can be integrated into the local chemical production complex in the lower Mississippi River corridor for a new high value-added product for the chemical industry. A third is demonstrating an analytical tool for cogeneration for combined electricity and steam production (CHP) as a means of substantially increasing energy efficiency and reducing greenhouse gas emissions that examines corporate energy use in multiple plants and determines the best energy use based on economics, regulatory emissions, and environmental impacts from greenhouse gas emissions. The Institute maintains a very active program in public service and maintains an extensive web site that provides continuing professional development self-study courses for professional engineers' PDH requirements. Also available on the web site www.mpri.lsu.edu are research results including journal articles, conference proceeding, technical reports, theses, dissertations and computer programs. The programs have installation files that can be downloaded and used on an

individual's computer. Included with the programs are users' manuals and tutorials. Two technologies which have immediate and substantial energy savings on chemical plants and refineries are "pinch technology" and "on-line optimization" and these short courses are available on request by contacting the Institute at www.mpri.lsu.edu.

Description: The Department's Petroleum Engineering Research & Technology Transfer Laboratory (PERTT LAB) provides a versatile, field scale facility for conducting high pressure hydraulics and multiphase flow activities. The facility is used by industry customers for equipment testing and product development, as well as for well control and multi-phase flow research, industry training, and undergraduate and graduate student education. It is the only facility of its kind in full-time use in the United States. A professional staff, supplemented by student workers and LSU faculty, perform facility maintenance, training, and research support. The key components are a 600-bbl capacity drilling fluid mixing and circulating system; a high-pressure choke manifold and control system; a 2,800-ft. well modeled for floating drilling operations; a 5,884-ft. model well for bottom supported drilling operations; a high pressure gas source to simulate a reservoir; a 9,600-ft. drill pipe flow loop; a 100-ft. flare tower, and a 45-ft. long variable inclination wellbore analog. A modular classroom building includes the main 21-person classroom and a computer training room with 8 PC's running DrillSIM5 well control training simulators and a CS well control training simulator. The training facilities are used for undergraduate and graduate classes and industry schools in well control, blowout prevention, and managed pressure drilling as well as other drilling, completion, and production subjects. The PERTT Lab is complemented by the Petroleum Engineering classrooms and instructional and research labs at the CEBA building.

Category: Educational
Institution/Training/Labor Personnel Services

Description: SRTTC offers over 75 training courses from one-half day to 7 days each at their facility in Robert, LA and at classrooms in New Orleans and Houston. They also offer consultation services to help a company design and develop training that fits its special needs.

Operations Training includes:
Drilling & Well Operations (Rig Floor Simulator, Wire Line Operations, Workover Operations, MMS Certifications, and Well Control);
Electrical (Dual Generator Packages, Electrical Systems, High Voltage Safety, Print Reading, OSHA Electrical Safety, PLC Controls, Motor Control Centers, General Controls, Electronic Process Control);
Subsea Operations (Subsea Field Layout--Standard Subsea Systems, Subsea Production Operator Training, System Overview, Computer Assisted Training, Flow Assurance), (Subsea Tree--Standard Tree Design, Gate Valve and Actuator Operation, Retrievable Subsea Choke, Subsea Control Module), and (Subsea Simulator--Basic Operation and Trouble Shooting Techniques); and Computer Operations.

Safety, Environmental, Regulatory Training includes Water Survival, Respiratory Protection, Medic First Aid/COPR, Incident Investigation (TapRoot) and Commentary Driving

Training Design Development offers companies assistance in conducting needs assessment/analysis; preparing and developing training objectives; developing customized, site specific training programs; and measuring training effectiveness based upon a company's performance objectives.

Description: The mission of the Advanced Materials Research Laboratory (AMRL) is strengthening and developing the energy research resources at Southern University, Baton Rouge. The AMRL-SUBR participates with local, regional and national laboratories for energy research programs. The focus of AMRL research is on development of advanced materials for harsh environments relevant to natural gas utilization (power generation systems) and exploration (drilling and recovery). Current research involves thermal and materials issues related to high temperature materials research for efficient and clean power generation, structural materials for aerospace systems, piping systems for petrochemical industry and infrastructure applications. The research also aims to enhance energy production and performance of power production systems.

Description:

Description: The major focus of the Institute is to build knowledge and expertise concerning a wide range of energy matters that impact the State and Federal economies. To that end, the University's science and engineering faculty, as well as that of the business school collaborate with each other and with technical units in other Louisiana schools to carry on research that improves the use and efficiency of the state's energy infrastructure. We also hope to create an incubator environment to strengthen the quality and quantity of individuals in various disciplines specifically related to the energy industry. Recent studies have included valuations of the LNG market in Louisiana and the balance of North America, Electricity congestion studies, and detailed analysis of the industrial impact of the recent hurricanes of 2005. One new proposed demonstration project is a study utilizing CO₂ from the stacks of Entergy's coal burning "Nelson" electric generating facility near Lake Charles, La. The goal is the injection of liquid CO₂ into existing mature oil wells for enhancing oil recovery. Partners in the project include Entergy and Hilcorp, Inc., Advanced Resources International (ARI), Mitsubishi Heavy Industries (MHI) and Waldemar S. Nelson & Co. Hilcorp, Inc. is involved with a number of oil wells in Southwest Louisiana (near the Nelson Plant) that are amenable to CO₂ injection. ARI has significant oil field expertise and MHI is providing the technology for capturing and purifying CO₂ from stack gases. Waldemar S. Nelson & Co. a major regional engineering firm, has extensive experience in gas compression, liquefaction, pipeline design, and environmental evaluations. Personnel at Tulane University will coordinate the project, oversee development, produce technology transfer reports, and author technical/economic papers. The initial goal is to demonstrate the engineering feasibility and the economic attractiveness, as well as the environmental and social benefits, of utilizing CO₂ from coal burning power plants for enhanced oil recovery.

Assuming a positive result, a pilot unit which captures about 10% of stack gases will be constructed using MHI technology to purify the CO₂, which will then be transported to one of the Hilcorp fields to demonstrate enhanced oil recovery. A demonstration period of two years is envisioned, after which a decision regarding a build out to expand the pilot unit to capture the entire CO₂ stream can be made.

Description: Chevron's Employee
Resource and Training Center,
established to provide training for its
employees working on oil and gas
production platforms in the Gulf of
Mexico, is now open to all industries and
companies looking for training on a wide
variety of topics. Its training center is
approved by many organizations,
including API and United States Coast
Guard. The training facility operates 24
hours a day, 7 days a week to
accommodate a variety of different work
schedules. The 40,000 sq. ft. facility
houses 7 fully equipped classrooms, a
computer training room, indoor
workshops, conference rooms, breakout
rooms, cafeteria, and living quarters.
There is also an onsite fire fighting range
and a heliport. Course offerings include,
but are not limited to the following:
OSHA Safety and Health courses;
General Training, including qualified
rigger, crane operator basic and rigger
refresher; Operator Training including
basic, Level 1000 and Level 2000
courses; Pneumatic Instrumentation and
Trouble Shooting; Valves and
Controllers; Gas Dehydration; Wireline;
Gas and Liquid Measurement;
PLC/SCADA; Production Safety System
Training (PSST); Computer Courses;
and Emergency Medical Responder –
Basic. Training available is not limited to
the above listed courses but may be
customized to meet a company's needs.

James.Cimato@mms.gov

Category: Government Entity

Description: The Minerals Management Service and offshore oil and gas producers cooperate on a number of projects, especially in safety of operations in offshore oil and gas development and in oil spill response research. One such Joint Industry Project (JIP) was formed between the MMS and 23 different oil companies to conduct research to simulate a blowout or pipeline rupture in deep water and obtain data to verify the predictions of a deep water blowout model being developed under a separate contract. See www.mms.gov/tarprojects for a listing of all JIPs, including Project 377, "Deep Spill." Another cooperative effort between MMS and industry is the Offshore Technology Research Center (OTRC) where research and assessments are conducted to promote the development of deep water oil and gas resources in a safe and environmentally sound manner and to facilitate the development of technologies for the efficient and pollution free development of deep water oil and gas resources. See www.mms.gov/tarprojectcategories/otrc.htm. MMS is also working with the domestic trade associations to develop common sets of performance standards for offshore operators and contractors and using mandated annual performance review process to share best practices and pass on safety information to all operators. There is a joint effort with industry to monitor and understand deep ocean currents in the Gulf of Mexico that benefits resource managers and the oil industry. Under a "Notice to Lessees" deepwater oil and gas platform operators are required to collect real-time ocean current data from deepwater drilling and production sites and forward it to the NOAA's National Buoy Center, which makes it publicly available on the internet. Another collaborative effort is the Coastal Marine Institute, an MMS-State partnership to strengthen relationships with coastal states where OCS oil and gas activities take place, and to improve the information flow to the affected States and the public. It

accomplishes this by using highly qualified researchers at State institutions of higher education to conduct research focused on environmental and socioeconomic aspects of OCS oil and gas and marine mineral development activities, issues of mutual concern to both the State and MMS. Several of these projects are jointly supported through in-kind contributions from platform owners. See http://www.gomr.mms.gov/homepg/regulate/environ/coastal_marine.html.

Description: The Center for Business and Information Technologies (CBIT) supports economic development through business and information technology research, development, and technology transfer. CBIT conducts research, develops software and systems, and creates commercializable products and services to transfer technology to the state and the region as its strategy for economic development and diversification. One such project is investigating the possibility of establishing a megasite of co-located petrochemical companies and their supply chains. The goal is to explore a technically feasible and economically viable megasite, which could serve as a major economic development engine for Louisiana

University of Louisiana at Lafayette Corrosion Research Center

Mr. James Garber
Phone: (337) 483-6151
Fax:
garber@louisiana.edu
www.chemical.louisiana.edu
Category: Educational Institution/Training/Labor Personnel Services

Description: The UL Lafayette Corrosion Research Center consists of a diversified group of engineers and scientists who are available to provide a multi disciplinary approach to solving corrosion related problems. Since 1985, the center has procured nearly 2 million dollars in sponsored Industrial and Federal research funds. The State Equipment Enhancement Fund has produced \$750,000 for procurement of corrosion related equipment. The center has a variety of corrosion related equipment and computers that make it uniquely qualified to perform corrosion research in the following areas: modeling of corrosion processes; evaluation of coatings; application of internal cathodic protection; galvanic and localized corrosion studies; inhibitors - functionality and laboratory testing; studies related to corrosion scales; corrosion properties of high alloy materials in various environments; and development of methods of monitoring corrosion rates in the laboratory and the field. Perhaps the most successful corrosion project undertaken by the center has been the development of the UL Lafayette Corrosion Prediction Model for Gas Condensate Wells. This model has produced international exposure and has fourteen industrial consortium sponsors. Recently, an Oil Well Corrosion Model was developed, which is being evaluated by the oil industry. The Corrosion Center has most recently been involved in modeling flowlines and pipelines for corrosion. These include 3-phase flowlines and pipeline networks that carry gas/condensates or oil. The project was sponsored by DOE at a cost of \$500,000 and the product is a visual basic model that is available to the industry free of charge. The center is continuing to work on this model and has an industrial consortium of 6 companies that are funding the work. The technical expertise developed by members of the Corrosion Research Center has allowed the development of training programs through the UL Lafayette Continuing Education's Louisiana Environmental Training Center. This program offers corrosion courses leading to certification

as an "Oilfield Corrosion Technologist" and an "Oilfield Corrosion Specialist."

Institution/Training/Labor Personnel Services

Description: The Institute provides expert knowledge of the geology and geophysics of the Gulf of Mexico and the Gulf Coast region. The primary concern is the application of that information for use by the petroleum industry, environmental concerns, and government institutions. It provides research, education and collaborative opportunities with partner organizations and individuals. Current research includes several projects involving high-resolution characterization of near surface geology; processing, extraction, analysis and interpretation of seismic attributes within 2-D and 3-D datasets; investigating the geologic setting and the potential for coal bed natural gas (CGNG) recovery and CO2 sequestration of these coals; and technology transfer through an 18-seat dual-processor dual-monitor PC-based training facility suited to offer a variety of short courses, seminars and workshops. The Energy Institute also maintains several Unix-based workstations for research, training, and to serve individual company needs. The Institute's relationship with the NASA/UL Regional Application Center provides access to high quality satellite data sets and hardware devices.

Description: The Marine Survival Training Center (MSTC) is a department of the University of Louisiana at Lafayette that was created through donations from the offshore industry and the local community. Our mission is to provide the best marine safety training in the world by using state-of-the-art training facilities and experienced motivated instructors while expanding global leadership in research and marine safety education. Since its inception, MSTC has brought more than 60,000 offshore workers up-to-date in water safety and survival techniques. MSTC's facilities include two training pools, a fire training field, and five davit launched lifeboats which are located on a 60-acre lake site adjacent to the Lafayette Regional Airport. MSTC was the first facility in the United States to offer state-of-the-art Helicopter Underwater Egress Training with the introduction of the Modular Egress Training Simulator (METS) in 1999. MSTC offers USCG and STCW '95 approved courses in survival craft, personal survival techniques, fast rescue craft, firefighting and CPR/first aid. MSTC is the only facility in the United States offering survival courses approved by the Offshore Petroleum Industry Training Organization (OPITO). Our training expertise is continually reflected through the lives we save today, and the lives we will save tomorrow.

Both

Description: SPL, Inc. was founded in 1944 as a small natural gas testing service and has become one of the nation's largest commercial environmental and petroleum testing laboratories.

Our qualified field technicians are knowledgeable in all aspects of measurement, analytical, sample procurement, field auditing, electronic instruments installation and maintenance, and telecommunications. We also stocks a wide range of parts related to measurement and analytical.

SPL is a strong proponent of the partnering concept with all of its clients. Currently, we have national contracts with many consulting firms, petroleum, chemical, pipeline, manufacturing, shipping and transportation companies. Our clients/partners have come to understand that by contracting with a primary supplier of lab services, and expert measurement and analytical personnel, their overall service and quality is improved. Additionally, the costs of doing business are reduced.

SPL strives to add value for our clients throughout the lab procurement process and all other areas of Hydrocarbon and Environmental analysis, Gas and Liquid Measurement as well as Auditing, Allocation, and Fabrication. We realize by adding value, we can and will establish long-term relationships with our clients.
